# Color*fast* Hexed!
by Brian Homan

Red Player – Red, Purple, Orange

Blue Player – Blue, Purple, Green

Yellow Player – Yellow, Orange, Green

Goal: Get five hexes in a row that include only color cubes from your color combo.

Setup:
Place one cube of each color on its indicated hex on the game board

On your turn, do one of the following:
1. Place a cube of your color on any empty hex on the board.
2. Convert a cube that currently exists on the board to another color that is adjacent on the color spectrum shown at the bottom of the page.

You may not alter a cube just placed by either of your opponents, and you may not place/replace a cube in any of the spaces adjacent to where your opponents just placed/replaced a cube.

2-Player game (red vs. blue):
Play the game as normal for three players, but after you add/change a color cube, you will place a yellow cube in an unoccupied hex. If you cannot add a yellow cube,

Color*fast* Hexed!

you must alter the color of a cube that is currently on the board one color closer to yellow on the color spectrum.
